

## **Losmandy Owners! Tired of Carrying Your Mount Outside?**

Tired of taking the telescope off the mount, disconnecting cables, and carrying the mount and tripod out to the driveway or backyard? Not strong enough to pick up the mount and telescope together? Be observing in thirty seconds, with ScopeRoller™! Roll your Losmandy GM-8, GM-100, G-11 or Celestron CI-700 out of the garage or storage shed—no disassembly required.

**GM-8**

**G-11, GM-100 & CI-700**

These casters slide directly into the legs, and add approximately 3.5" to the height of your mount. Each wheel has a foot brake for slight slopes. (Not recommended for steep slopes.)

The wheels are three inches in diameter, non-marking plastic, and are not recommended for broken or loose surfaces. They work well on concrete, gravel, and most other hard surfaces. They have a recommended load capacity of 135 pounds each—far in excess of the weight of your mount, tripod, and recommended load. They add less than two pounds to the tripod (for the GM-8) and less than four pounds (for the G-11, GM-100, and CI-700), and require no alterations.

Before ordering, verify that the inner dimensions of your GM-8 tripod legs are 1.00” x 1.00” square. The caster legs are 0.985” +/- .005” to make sure that they fit in current production Losmandy GM-8 legs. For the G-11, GM-100, and CI-700, the caster legs are 2.26” +/- .005”. This will fit current and recent production legs which are 2.36” inside diameter.

Casters sets for other mounts will be available soon—make your request for other mounts, and we will do our best to make what you need.

The introductory price for a set of three for the GM-8 is \$40 plus shipping,\* and \$90 plus shipping for the G-11, GM-100, and CI-700 set. (Idaho residents please add applicable sales tax.) Contact [casters@claytoncramer.com](mailto:casters@claytoncramer.com) to order. Quantity pricing is available on orders of five sets or more. Retailers, please contact us for wholesale pricing.

Proudly made in the USA, from entirely American-made components.

---

\* Introductory pricing is on the initial production run, which are handcrafted. The finish and appearance of the parts that you cannot see after installation may not be consistent or cosmetically perfect. Function, however, is guaranteed.
